Bosch ribbed V-belts for commercial vehicles

### **Bosch: Development and manufacturing expertise**

As one of the world's largest developers and manufacturers of automotive products, Bosch can make the most of a wealth of engineering experience and innovative materials for all their commercial vehicle ribbed V-belts:

- ▶ The latest types of rubber for optimum wear characteristics under the toughest usage conditions
- ▶ Single belt characteristics: Minimum vibration, resistant to impacts and pulsating operation
- ▶ High-tech cords in tension member – aramid cord reinforcement in upgrade version: Impact-resistant, extremely high load capacity
- ▶ Low profile height: Flexible bending characteristics, optimum thermal properties even with small diameters in serpentine drives

### **Bosch ribbed V-belts with high-tech cords**

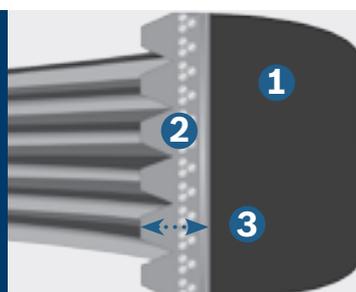

Ribbed V-belts in commercial vehicle engines must guarantee reliable operation under tough conditions. Thanks to the use of innovative synthetic rubbers and heavy-duty high-tech cords, Bosch produce low-stretch commercial vehicle ribbed V-belts with outstanding tension properties. They are able to withstand even heavy loads without suffering deformation or wear. Designed specifically to suit the long wheelbases, high engine power and severe vibration encountered in commercial vehicles, they ensure economical and reliable running.

### **Upgrade version: Heavy-duty ribbed V-belts with aramid cords**

Guaranteed reliability even for large drive units subject to extreme loads: In the upgrade version of the Bosch commercial vehicle ribbed V-belt, low-stretch aramid cords provide an additional higher strength in the tension member. Alongside minimizing the risk of tearing and wear, a further advantage of this design is its ability to resist impacts.
